

A-Tech Concrete Sealer

Natural Look Silane/Siloxane Water Repellent

A-Tech Concrete Sealer water repellent is a water-based emulsion of siloxane and alkylalkoxysilane (10%) solids. A-Tech Concrete Sealer penetrates into exterior masonry and brick substrates to protect against water penetration.

Concrete Sealer penetrates the masonry substrate and chemically bonds itself. This provides a long lasting protection from water penetration, staining or deterioration. Concrete Sealer will not darken the substrate or develop a film on the surface. The substrate can still naturally breathe after application to release water vapor.

Benefits:

- Makes substrate water repellent
- Maintains surface appearance
- 100% vapor permeable
- Efflorescence protection
- Reduces freeze-thaw damage
- Water-based formula

Sizes:

- 1 Gallon Jug
- 5 Gallon Pail
- 55 Gallon Drum

Where to Use:

- Exterior concrete
- Vertical walls
- Horizontal areas
