

# Speed Paste

## Fast Set Surface Seal and Port Adhesive

Speed Paste is used for bonding, sealing and repairing substrates. Its primary use is as a surface port adhesive and concrete crack surface sealer. Speed Paste has a very fast cure time. Cracks sealed with Speed Paste can be injected after 10-15 minutes.

Once cured Speed Paste has a high bond strength to the substrate. It is resistant to heat, solvents and most chemicals.

Speed Paste is used in conjunction with Applied Technologies Injection Ports and crack injection epoxies and urethanes.

### Benefits:

- Inject after 10-15 minutes
- Low odor
- High bond strength
- Re-use remaining material

### Where to Use:

- Adhere injection ports
- Sealing of crack surface

**Size:** 300cc x 300 cc cartridge  
6/Box

### Limitations:

- Not recommended for use where removal is necessary

**Color:** Grey (mixed)
